

Cyber Security

Keeping Norstar's service secure is a 24/7/365 operation. We employ multiple layers of security to protect your data and communications, while guarding against fraud and service abuse.

Robust, end-to-end network security and strict industry-leading Service Level Agreements (SLAs).

With cyber threats expanding exponentially, you need a high-performance network security solution that protects your network, users and data from continually evolving threats. Preventing fraud is among the top challenges banks and financial institutions continue to face. Norstar's data security methods and security platforms will detect and mitigate threats in a timely manner. Our Compliance and Security plan includes high security email, file sharing and web application security tools. Everything you need to succeed in today's high-pressure business climate, from encrypting sensitive correspondence, proposals and research to collaborating on due diligence with private room access controls for documents. We understand that financial institutions are facing increasing IT threats, including complicated compliance processes. From risk assessments, DR and business continuity planning, DDoS mitigation, threat detection, to end-user awareness training and compliance consulting, Norstar has a host of services available to maintain compliance, mitigate risk, and ensure security.
